

Which is the right Medela Breastpump for Me?

Why do you want to express?

I have twins or multiples

My baby was born prematurely

I have health problems, or am unable to exclusively breastfeed

My baby has health problems, or difficulty feeding from the breast (eg. tongue tie)

I am returning to work and want to continue breastfeeding

I want my partner to help out with feeds

I want the freedom to pop out to visit friends, or go to an exercise class

I am going away overnight and need to leave baby

I'd like to have a breastpump 'just in case' something urgent comes up

I dont know yet!

I can only feed expressed milk

I am supplementing some feeds with expressed milk

How often?

More than once a day.

Anything from once a day to a few times a week.

A double electric breastpump will boost your supply, and if you will be expressing for a number of months this would be the most cost effective solution.

If you need to express more than one feed a day, try a double electric breastpump for maximum efficiency. For those with less demand a single electric pump will suffice.

Swing single electric Pump

A manual pump will suit you best. If it's really urgent you can always rent a pump for a few weeks

Harmony Manual Pump

Start expressing a few days beforehand with a single electric breastpump.

Swing single electric Pump

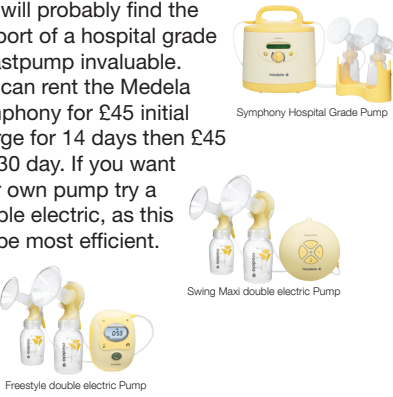

A single electric breastpump will meet your needs!

Wait and see how you get on with breastfeeding. You'll soon realise how much need you have for a breastpump.

You will probably find the support of a hospital grade breastpump invaluable. You can rent the Medela Symphony for £45 initial charge for 14 days then £45 per 30 day. If you want your own pump try a double electric, as this will be most efficient.
